

# About My Website

## Peer Feedback

Feedback was Given by  
**Ana Soraia Matos**

The feedback I got from my classmate Ana was very helpful. Apart from pointing out things that I had already noticed beforehand, she also highlighted aspects that I might have missed, such as having some blurred images on the website. Overall, she mentioned that the website demonstrates a strong design with a clear structure and consistent layout across all pages. One of its main strengths is the clean navigation, which makes it easy for users to move between sections such as Home, Courses, About, and Contact. The use of banners and imagery also helps give the website a professional and engaging appearance, making it visually appealing for the target audience, which includes students and people in college. Another strength is the clear presentation of information, especially on the

Courses page, where content is well organised and easy to understand.

However, there are areas that could be improved. One suggestion would be to ensure all images load correctly, as some of them ended up being blurred. Another improvement would be to fix the logo on the banner across all pages by making it bigger and more consistent, so the website feels more welcoming, like the rest of the pages. She also suggested linking the hovering buttons to other pages so that they work properly. This would make the website easier to use for all users. Overall, the website is well designed but could benefit from small refinements to improve usability and accessibility.

# Self Evaluation

This website was designed with the aim of meeting the needs of my user persona, which mainly focuses on students and young people looking for clear information and easy navigation. Overall, the website works well in terms of structure, consistency, and layout. One of the strongest aspects of the design is the clear navigation bar, which was one of the most important features I wanted to include in my website. This allows users to move easily between pages such as Home, Courses, About, Apply, and Contact. This was also supported by survey feedback, where users mentioned that the website needed to be “easy to navigate” and that the information needed to be “well organised.” The consistent use of banners, colours, and layout across pages also helps create a professional and visually engaging experience trying to keep them as close to the original as possible but also trying to add my signature touch throughout the whole website.

One of my favourite pages on the website is the About Me page. I feel this page is the most thought-out, as it is the one I spent the most time perfecting and designing the way I wanted it to look. Taking information and images from the MCAST website itself helped fill the page and made it more informative and user-friendly. I focused on layout, imagery, and spacing to make the page feel welcoming while still remaining clear and organised and also added hover effects to the images where those could be buttons to help explain more about the school and its systems.

Through creating this website, I also developed a range of technical and design skills. I improved my understanding of HTML and CSS, particularly in areas such as page structure, navigation, banners, and layout consistency. I learned how small design choices, such as spacing, image quality, and font consistency, can have a big impact on the overall user experience. This project also helped me understand the importance of planning, starting from a Figma mock-up and then translating that design into a working website. Although I faced challenges, such as fixing image issues and linking buttons correctly, these problems helped me improve.

Looking at the final website and seeing how it started as a simple mock-up on Figma, I am happy with the final result. By considering all the suggestions from the survey, I believe I managed to turn what users wanted in a website into reality. However, if the website were to be used in real life, it would still need a lot of improvements. Some images are blurred, and as my classmate Ana pointed out, the footer on the home page is different from the rest of the pages. I also wish I had linked all the buttons across the different pages and made the logo bigger and more consistent throughout the website. These are areas I will continue working on in future projects. Nonetheless, I hope this website clearly reflects my ideas, creativity, and effort.
